

Geyser Blanket

Product Code: FSGB
Barcode: 600284405 6575

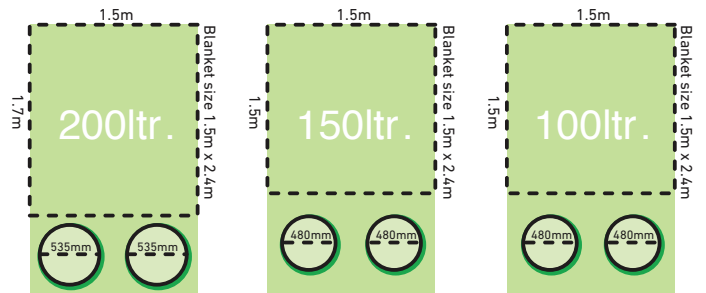

- Reduced costs
- Quality ISOTHERM certified product
- Made from Polyester and is safe and easy to install
- Made from recycled PET bottles
- No protective clothing required for installation

More geyser energy saving tips:

- Keep your thermostat setting between 45°C and 55°C.
- Switch off your geyser when not at home for extended periods, e.g. on holiday.
- Shower rather than having a bath.
- Ensure that all taps are properly closed; especially hot water taps.
- Insulate inlet and outlet pipes of the geyser.
- Situate the geyser as close as possible to the point of water use.

Cutting diagrams

Six steps to energy saving

<p>1</p> <p>Measure and cut with scissors to fit around geyser with sufficient overlaps to accommodate the end caps.</p>	<p>2</p> <p>Ensure geyser is completely covered with ISOTHERM and secure with adhesive tape (not included).</p>
<p>3</p> <p>Cut out two circles of ISOTHERM to be placed as end caps (see cutting diagrams below).</p>	<p>4</p> <p>Do not secure the end caps with adhesive, this will hamper access to the thermostat and relief valve.</p>
<p>5</p> <p>Tuck in the end caps securely within the overlaps.</p>	<p>6</p> <p>Cut strips of ISOTHERM to wrap spirally around inlet and outlet pipes (and around all extra hot spots). Secure with adhesive tape.</p>

TECHNICAL INFORMATION

Specifications:	
Suitable for	250l electric geyser
SANS 428: Fire performance classification	B/B 1/2
ASTM - E84: Spread of flame:	NIL
ISOTHERM Certification	
Made from	Recycled PET bottles

THE PACKAGE CONTAIN

1 x FSGB Polyester Geyser Blanket
